DocSTAR™ NetConnect:

The Internet Connectivity Module

Scan, file and retrieve your documents;
no matter *where*, no matter *when*!

DocSTAR™
S E R I E S 3

Find all of your documents— no matter *where*, no matter *when*!

Tired of needing an important document, only to remember that it's back at the main office? Run down from lugging archives of paper from one location to the next? In today's mobile, multi-location world, it seems that work is everywhere, but your documents aren't. You feel disconnected.

Until now.

NetConnect is an innovative, optional software module, which lets you access your host DocSTAR from any location with a high-speed Internet connection* (such as DSL or cable modem) or over a wide-area network (WAN). It connects you with critical documents whether you're in your headquarters facility, a satellite office, or on the road.

So easy that you'll want to use it everywhere

NetConnect allows you to work with DocSTAR across the Internet the same way that you do in the office. It builds upon the same, easy-to-use Windows®-based software that makes DocSTAR unique, so that scanning, filing, retrieving and viewing documents across the country is as simple as being connected through your LAN. Information passes seamlessly over the Internet, behind the scenes, without additional steps or complicated user intervention.

NetConnect is designed to work with DocSTAR Series 3 Enterprise and Departmental editions. (See System Requirements.)

Add accessibility without subtracting security

Because NetConnect was developed upon standard Internet protocols (XML over HTTP; SSL compatible), it melds seamlessly into your secure network environment. It is compatible with most firewalls, routers and gateways so that your documents are accessible to you anywhere, but out of reach to hackers and other unwelcome visitors everywhere.

NetConnect also works with DocSTAR's exclusive AuthentiDate™ technology, which guards your documents against unauthorized tampering.

System Requirements

DocSTAR host system running Microsoft Windows 2000 Server and DocSTAR Version 3.0 or later.

(Series 3 Enterprise or Departmental editions are highly recommended)

Client PC running DocSTAR View, View/File, or ScanStation software with Microsoft Internet Explorer 5.0 or later installed.

WAN or high-speed Internet connection* required for DocSTAR Host and each remote client.

Suitable network security features and anti-virus software are highly recommended.

*NETCONNECT WORKS WITH BROADBAND CONNECTIONS ONLY; IT IS NOT DESIGNED FOR USE WITH DIAL-UP INTERNET CONNECTIONS.

Call today, and get NetConnected!

SO PUT AN END TO THAT DISCONNECTED FEELING:
